

## MOAMA DENTAL CLINIC

---

We hope you will be happy with your new dentures. In order to keep them looking new it is very important that you look after them and clean them properly.

Clean the dentures daily using the brush and solution provided and following the instructions on the bottle.

Fill the basin with water and clean your dentures over the basin. When the solution is finished you can have the bottle refilled at the dental clinic for a small fee.

**MOST IMPORTANT- Remove your denture every night and keep them in a cool dry place away from pets, this will ensure your gums are kept healthy and keep bone structure for the denture to be seated comfortably for a very long time.**

DO NOT clean your dentures over an empty basin as they may fall and will break.

DO NOT use toothpaste to clean your dentures, as this is abrasive and will spoil the surface, or soap as this may stain them.

DO NOT place in bleach solution

DO NOT attempt to adjust your dentures at home, please call the clinic to make an appointment with your dentist.

If you look after your dentures, they will keep looking good for a long time.
